

Precise. Rugged. Universal.

Multi channel modules for trunk and test stand

The new multi channel measurement modules with **16 temperature or 8 voltage inputs** are particularly suitable for multi channel applications, where space is not extremely limited, e.g. in the trunk or at test stands.

The **industrial series** of these modules has the same excellent technical data as the automotive series. Only the operating temperature range is limited to +85° C and the protection class is IP50.

Therefore the modules convince with a **particularly low channel price**. Interesting for customers who do not have extreme environmental conditions.

The industrial modules differ from the automotive modules with a blue anodized housing.

The 16-channel Thermo-Scan MiniModul is available with **NiCr-Ni Mini Thermo single inputs** (THMM 16) and alternative with **2 NiCr-Ni 8-channel multi connectors** (THMC 16).

The 8-channel AD-MiniModul (ADMM 8) has 8 bipolar voltage inputs with bipolar sensor excitation, switchable per channel. It is available with LEMO 0B, LEMO 1B and BNC connectors.

THMM 16 Industrial

ADMM 8 Industrial
