Product description

The measurement module **CNT4 evo** is a further development of the CNTMM series. Its functional range is identical to the former measurement module CNTMM 4 pro. In addition, the **CNT4 evo** is prepared for the use of TEDS-capable sensors. Moreover, CAN ID and measurement data rate can be set separately for each channel.

The **CNT4 evo** is a high-precision measurement module designed for the measurement of frequencies up to 300 kHz, duty cycles and PWM signals, cycle/pulse durations as well as for event and up and down countings. Speed (rpm) can be measured in the module directly and transferred to the CAN bus as measurement value. The time offset between neighboring channels can also be measured.

Shipping content

- MiniModule CNT4 evo
- Configuration software CSMconfig
- Documentation
- Calibration certificate

Maintenance

- Calibration every 12 months recommended

Accessories

- See datasheet "CAN Accessories"

---

**Key features**

- 4 galvanically isolated inputs for
- Up and down counter via pulse / direction or quadrature signals
- Event counting up to 32 bit
- Frequency measurement
- Cycle / pulse duration
- Duty cycle / PWM
- RPM measurement
- Time offset measurement
- On/off trigger thresholds, adjustable per input, switchable AC coupling
- TEDS ready: Prepared for TEDS-capable sensors
- 8 logical channels
- Sensor excitation
## Technical data

<table>
<thead>

### Inputs / logical channels

- **4 / 8**
- **Input signal level**: ±60 V DC
- **On/off trigger thresholds**: ±5 V, in 10 mV steps or ±50 V, in 100 mV steps, each input separately adjustable, AC coupling switchable
- **Internal resolution**: approx. 30 ns
- **Measurement data rate per ch.**: 1, 2, 5, 10, 20, 50, 100, 200, 500 Hz and 1 kHz adjustable per module or per channel via configurable CAN identifier
- **Channel-specific comments**: free text consisting of up to 100 characters per channel

### Input protection

- **Operational safety**: ±60 V permanent
- **Device safety**: ±100 V permanent, additional ESD protection
- **Input impedance**: 500 kΩ || 1 nF
- **TEDS support**: according to standard IEEE 1451.4 (Class 2)

### Operating modes and measurement ranges

- **Frequency measurement**: 0.1 Hz to 300 kHz
- **Cycle / pulse duration**: 1 µs to 100 s
- **Duty cycle / PWM**: 0 % to 100 %
- **Event counting**: 0 to 65535 (16 bit) or up to 32 bit
- **Up/down counting**: via pulse/direction or quadrature signals
- **RPM measurement**: 0.01 rpm to 60000 rpm
- **Time offset measurement**: 1 µs to 100 s

### Measurement uncertainty

- **at 25 °C**: max. ±(0.01 % of measured value + 1 LSB)
- **Temperature drift**: max. ±100 ppm over entire temperature range

### Sensor excitation

- **Voltage**: 5, 8, 10, 12, 15 V DC
- **Current**: max. 120 mA (sum of all channels)

### Galvanic isolation

- **Channel / channel**: 500 V
- **CAN / channel**: 500 V
- **CAN / power supply**: 500 V

</table>

1. Observe information regarding the intended use. See CSM document “Safety Instructions MiniModules”.
2. Hardware prepared for TEDS support.
3. These MiniModules are designed for measurements in vehicles with 12 V, 24 V, or 48 V on-board power supply systems. The maximum operating voltage at the measurement inputs is 60 V. Not suitable to be directly connected to systems with higher operating voltages, e.g. high-voltage batteries of hybrid or electric vehicles.
4. Optionally available in other variants.
