

## CSMcalibrate Licensing Model

### License acquisition

- ▶ The buyer acquires a license granting the right to use the delivered software version for a limited period of 12 months (license subscription).
- ▶ The software can no longer be used after the license period has expired.

### Maintenance

- ▶ The maintenance costs are included in the license fees. The scope of maintenance includes:
  - ▶ Support for further module types according to version planning
  - ▶ Enhancements to the software's range of functions
  - ▶ Ensuring compatibility of new hardware revisions and firmware versions
  - ▶ Support by phone and e-mail

### Start of the period of use

- ▶ The licensed period of use begins on the date of delivery of the CSM hardware and software components. The period of use can be verified in CSMcalibrate in the menu at **Help | License**.

### Options for license renewal

- ▶ Extension of the license by 12 months when purchasing the software. The total period of use is then 24 months.
- ▶ Extension of the license for a further 12 months before the expiration of the valid license.<sup>1</sup>
- ▶ Renewal of the license for several years in advance.
- ▶ In the event of a suspension of use, a 25 % surcharge may be levied on the license renewal price when a further license renewal is requested.

### Scope of license

- ▶ A license entitles the user to use CSMcalibrate to calibrate an unlimited number of CSM measurement modules according to the CSM standard.
- ▶ The calibration of CANopen measurement modules and measurement modules with special firmware is not included in the scope of functions of the software license. A special license has to be purchased for calibrating these measurement modules.

---

<sup>1</sup> As of version 2.0.0, the CSMcalibrate software provides the option to specify an advance warning time that indicates the expiry of the license in x days under **Help | License**. For x, a lead time between one and 365 days can be defined.

## License model

- ▶ The license for CSMcalibrate is linked to a hardware dongle. The software can be used in conjunction with any PC/notebook to which the hardware dongle is connected.

## License fees

The license fee depends on the number of CSM measurement modules purchased.

License designation	Number of modules
CSMcalibrate Package S	less than 100
CSMcalibrate Package M	100 to 499
CSMcalibrate Package L	500 and more
