

# AD4 MX2

## Product description

AD4 MX2 is a new edition of our classic ADMM 4. Its extremely compact size (approx. 93 × 30 × 46 mm) remains unchanged, the technical characteristics have been further improved and optimized.

AD4 MX2 is the smallest member of the CSM measurement module family and was designed for applications in engine compartments with limited space. Four differential voltage inputs with unipolar sensor excitation provide excellent measurement accuracy.

The integrated TEDS functionality supports sensor configuration and identification for the application.

## additional products

### AD4 pro MC10

AD4 pro measurement modules cover an extremely wide range of applications. They can be used for voltage measurement, high-precision current measurement (via shunts), measurement of very low voltages (such as strain gauge based sensors measuring at mV levels), and the acquisition of higher frequency signals with measurement data rates up to 10 kHz.

### AD4 OG10

AD4 OG10 provides the means to perform measurements with measurement data rates up to 10 kHz per channel at a high Ethernet bandwidth. EtherCAT® time synchronizations are fully supported. AD4 OG10 is either operated by using an EtherCAT® master via CANopen over EtherCAT® (CoE) or by using the Ethernet/ EtherCAT® protocol converter XCP-Gateway in combination with an XCP-compatible data acquisition software.
